ABSTRACT OF DISCLOSURE

C) A hypertext display device of the present invention has a user interface (designating unit) for designating an object (informing data) such as a link text attached contrived for telling an user in HTML data. When interfaced, the displayed hypertext data, including the object, is acquired by a first information acquiring unit and link information designated by the user interface is stored in a table in a pair. The displayed HTML data themselves and the HTML data indicated by the link information are sequentially acquired by data acquiring unit referring to the table and then stored in data storage unit. Both acquired information is stored in a table in a pair. The displayed HTML data themselves and the HTML data indicated by the link information are sequentially acquired by data acquiring unit referring to the table and then stored in data storage unit.
